

Why is Fulvia called The Fountain of Youth?

We live in a world that is hopelessly contaminated with thousands of toxic chemicals in our soils, water, air, building materials, fabrics and almost all of our foods. The average American, including newborn babies has over 160 disease causing chemicals and toxic heavy metals, like lead and mercury in their bodies.

The 74 organic trace minerals essential to good health rarely exist in our pharmaceutically based nutritional supplements nor in our chemically grown foods.

The net result is global state of chronic and infectious disease never before seen in human history that has overwhelmed modern medical science.

Natural health scientists however, have confirmed that a body free of toxins and rich in organic trace minerals can live a long and healthy life without dependence on drugs or surgery and experts today are saying that the principles of prevention are also the principles of remission.

Back in the 1400's sailors often got a dreaded disease named Scurvy. In those days, people died within six weeks of contracting it. Then one day a sailor brought some limes on board and he didn't get sick when the other sailors did. Sailors started eating limes to prevent Scurvy and that's why they were called Limeys. Scurvy is more deadly than Cancer, but is prevented by simply supplementing with Vitamin C.

What people don't know today is that deadly diseases like Cancer can be prevented just as easily as Scurvy, but the pharmaceutical industry doesn't want you to know that. For example: Dr. Otto Warburg discovered that Cancer cannot live in a pH of 7.0 and was awarded the Nobel Prize in the field of Medicine in 1931, but the American Medical Association went to great lengths keep this information from becoming public knowledge.

The Fulvic Acid in our Fulvia product does to most other diseases what Vitamin C does to Scurvy. If that were true, wouldn't you want all of your friends and family using it?

Cancer is BIG BUSINESS and the pharmacies and doctors would stand to lose approximately 1.5 million dollars per Cancer patient if it were prevented. There is no financial incentive to cure or prevent Cancer or any other dreaded disease.

A few years back I learned about a famous nuclear physicist who was born sickly and had many serious health challenges throughout his life. A major childhood disease caused one leg to become stiff like a board. He described it as walking on a wooden leg for over 50 years. As a child he was unable to

get a formal education because of his poor health but he had an Einstein like intellect and easily breezed through high school before going on to become a Nuclear Quantum Physicist.

At age 59 this gifted researcher retired because he was facing an early death if he didn't do something right away. In an effort to turn his health around he applied his scientific genius to learning what causes the body to age and get sick. In this quest he found the hidden secrets to living a long and healthy life.

He discovered the atoms that make up each human cell get electrically unbalanced, so he began looking for a way to re-energize them. His research led him to trace minerals thousands of times smaller than the human cell and which have a strong negative electrical charge and the ability to produce water right inside the cell like a tiny "Fountain of Youth."

In order for minerals to really work, three things must come into play. First the minerals must be thousands of times smaller than an angstrom unit of measure. Secondly, the minerals must have a negative electrical charge and finally, they must be from a plant source.

In using these minerals, the Dr. had some amazing things happen. He regained mobility and now walks on a normal leg. His eyes, which had degenerated quite early in life returned to 20-20 vision, he has abundant energy and he says his joints are flexible like those of a teenager.

He introduced these minerals to a number of other sick people who each got over of their health problems within six months or less and each of them appeared to be growing younger as a result of using the minerals.

These minerals are found in large deposits in the Himalayan Mountains and they come from an ancient plant source. The people in this area produce offspring beyond a hundred years of age and live to raise those children and to often enjoy their grandchildren.

Not until I found **Fulvia** did I have a source of plant based trace minerals that are small enough and perfectly charged in such a way that they are able to electrically restructure and strengthen the atoms that make up the cells in our bodies.

Fulvia is unlike any nutritional product on the market today in its ability to facilitate a healthy metabolism and healing throughout the body.

These organic trace minerals are required for every metabolic function in the body and a lack of these minerals leads to disease, premature aging and early death!

Taking mineral supplements seldom satisfies what the body needs. Almost all mineral supplements, even those suspended in liquid are too big to get into the cell, or they come from crushed rocks and have a positive electrical polarity which renders them useless.

Fulvia has the ability to clean out the receptor sites in our cells that get filled up with petrochemicals from chemical fertilizers, herbicides and pesticides, which are taken up by plant roots into the fruits and vegetables that we eat, and modern day plastics, automobile exhaust, industrial waste, household cleaners, deodorizers and pharmaceutical medicines, just to name a few block nutrients and hormones from entering the cell.

If you can picture a key that is broken off inside a lock, minerals and hormones that are designed to run the human body get blocked from entering the receptor sites as a result of these toxic intruders that are stuck in the biological keyways of every living cell.

For example, in the case of adult onset diabetes, the body produces plenty of insulin, but it doesn't work properly without the right trace minerals. This leads to insulin resistance or syndrome X, excess fat and high sugar levels destroy vital cells everywhere in the body.

There are two reasons why the insulin may not work. Either the insulin receptor sites are blocked, or the person is lacking the essential trace minerals chromium and vanadium to cause the insulin to do its job.

In either case, Fulvia may help because it unblocks the keyway to the cells and provides the absolute best minerals to help the insulin to do its work. The same can be true of other hormones such as thyroxin, progesterone, etc.

The Fulvic Acid in Fulvia is a powerful electrolyte and we need electrolytes to facilitate proper enzyme reactions, energy production, cell repair, immune response and cellular communication. Nothing good can happen without electrolytes!

Our brains, nerves and cells need electrolytes to carry the nerve impulses. Like a car that runs better when it gets a new set of spark plugs, Fulvia gives the human body a much needed electrical tune up.

Fulvic Acid also helps to balance pH and oxygen levels in the blood. Bacteria; yeast, mold, fungus, candida and even cancer cells die in an oxygen rich environment. That is why cancer cannot live in a pH of 7.0.

Fulvic Acid improves memory, mental clarity, alertness, elevates moods, energy, and controls weight.

The Humic Acid in Fulvia helps the body repair the worn out, broken down tissues in the body – like bone, cartilage, muscles, skin, organs and nerves.

The Resveratrol in Fulvia is an anti-microbial substance found in the skin of certain fruits. It protects the plants from the attacks of bacteria and fungi. Resveratrol is increasingly used for preventing diseases, including diabetes and obesity. Plus, it turns on 52 Youth Genes and stops premature aging.

Resveratrol protects against cellular damage caused by free radicals, which slows down the aging process. As a strong antioxidant, resveratrol helps prevent serious ailments including, heart and cardiovascular diseases. It has been shown to improve elasticity of blood vessels, lower blood pressure and cholesterol, while boosting heart health and lowering the risk of strokes and heart attacks.

Resveratrol as an anti-inflammatory can prove immensely helpful for autoimmune conditions like arthritis, alleviating pain and inflammation of the joints. Resveratrol naturally increases metabolism, which stimulates the burning of excess body fat. Many people have successfully used resveratrol for weight loss. It also can help treat and prevent insulin resistance in Diabetics.

Resveratrol has been found to facilitate the proper functioning of the nervous and immune systems, lower the risk for blood clotting, kidney diseases and retinopathy, inhibit the growth or proliferation of cancerous cells, and therefore, can prove effective in preventing several types of cancer, prevent age related disorders like, Alzheimer's disease and Parkinson's disease. My experience is that anything that can prevent a condition will often help reverse it.

Note: As a maintenance dose, I recommend at least 4 capsules a day for the average adult. Severe cases of mineral deficiency lead to severe forms of disease, and if I were suffering from a life threatening disease, I would personally consider mega-dosing with perhaps 10 capsules daily, which would cause the body to begin eliminating disease-causing toxins very rapidly. Although detoxifying in this manner could prove uncomfortable, it surely beats the alternative and is preferable to dying. In the beginning, start with only one capsule a day and gradually increase over a period of 7-10 days. Fulvia will not hurt you, but it will pull toxins out of your cells and bring them into solution for removal by the body. These toxins (not the Fulvia) could give you some symptoms of toxicity until the toxins are eliminated.

Be sure to drink plenty of pure water to help the body eliminate these toxins.
